

Nuffield Research Placements

“Not your average holiday job!”

STEMPOINT can provide Year 12 students an engaging online research project supervised by an expert in a university, research institute or company.

Applicants from low income homes will be prioritised.

Students are offered their very own research project, working alongside professional social scientists, scientists, engineers, technologists or mathematicians.

Students will also take part in online module assignments designed to develop their essential professional, research, data and numeracy skills.

The scheme is highly regarded by universities and companies, a must for students interested in STEM and quantitative social science careers.

Read what previous students have said about Nuffield Research Placements

I found it to be a very good experience that helped me improve my skills like report writing and also it helped to make decisions about what I wanted to do in the future. I received a lot of support from the company and they really helped to show me how things are done in the work place and made me feel like a part of the department.

It absolutely enjoyed my work experience. It's was a incredible experience I ever had. I loved every single minute of it. It was an eye opening experience for me and it made me love science even more. I believe it has helped me immensely.

The crest report was a lot of work but its a piece of work that i'm immensely proud of and my supervisor gave me a huge number of useful tips for university in general and report writing in particular. Far better than the extended project qualification training provided by my school

I had a fantastic opportunity to develop my research skills and learn more about science and technology.

I felt I learnt skills in a research environment which confirmed my choices in terms of higher education.

I completed the project and have something amazing to put on my UCAS application. Because I am glad I had the opportunity to contribute to genuine research and do something that hasn't been done before

Throughout my project I was able to talk to my supervisor for guidance and was free to ask any questions if I was ever unsure about anything. The placement was a truly unique experience and being able to carry out a project by myself was an amazing opportunity. I learnt so many skills from this experience and I was given a really interesting project.

It was a unique and interesting experience that helped me make important decisions.

Nuffield Research Placement have given me opportunities and experience which I have never come across before. It has enabled me to understand my career pathway even better and given me confidence to pick this career path.

I was given support and guidance during my placement. I had learnt a lot about what a career in research might be like and enjoyed the experience.

In general, the experience was not like any other. I enjoyed my time working with scientists and researching. I have found more of a passion for researching now than before I joined.

I am so thankful for my mentors that aided me step by step every day. I am happy I got a chance to experience such event.

It was a positive and insightful experience in the field of biomedical sciences and human-computer interaction. Also, I got an opportunity to be part of a research team and work under supervision alongside PhD students.

Because it allowed me to gain skills that I did not previously have - e.g. performing a literature search. Everyone was kind and it was well organised, with plans starting from the get-go. My co-ordinator was wonderful and so was the my project supervisor, Ellen.

"We have been blown away by the extraordinary research reports and posters the students have produced. Some of which have exceeded expectations and been nominated for awards." *Supervisor, The Environment Agency*
